

Rack and shelter space are in short supply

TX RX specializes in integrating system components into compact units. **The result:** tower top amplifiers (TTA), combiners, receiver multicouplers (RMC), filters and duplexers that are the smallest on the market.

- Small size = systems that are easier to design and install, and require less rack space.
- Integrated units have fewer cables and connectors = less points of failure and RF loss.

2-channel Combiner, Duplexer and RMC

High Power TX Filter with Integrated Power Monitor
